Getting Started

3 **Configure your template paths**

Add the paths to all of your template files in
your `tailwind.config.js` file.

```js
tailwind.config.js                                    📋

module.exports = {
  content: [
    "./src/**/*.{js,jsx,ts,tsx}",
  ],
  theme: {
    extend: {},
  },
  plugins: [],
}
```

4 **Add the Tailwind directives to your CSS**

Add the `@tailwind` directives for each of
Tailwind's layers to your `./src/index.css`
file.

```css
index.css                                             📋

@tailwind base;
@tailwind components;
```

tailwind.config.js U ●

client > tailwind.config.js > ...

```javascript
1  module.exports = {
2    content: [
3      "./src/**/*.{js,jsx,ts,tsx}",
4    ],
5    theme: {
6      extend: {},
7    },
8    plugins: [],
9  }
```

4 **Add the Tailwind directives to your CSS**

Add the `@tailwind` directives for each of Tailwind's layers to your `./src/index.css` file.

```
index.css

@tailwind base;
@tailwind components;
@tailwind utilities;
```

5 **Start your build process**

Run your build process with `npm run start`.

```
Terminal

> npm run start
```

6 **Start using Tailwind in your project**

Start using Tailwind's utility classes to style your content.

```
App.js

export default function App() {
  return (
    <h1 className="text-3xl font-bold underline">
      Hello world!
```
